

Individual Reflection 29/3 - 2019

- What do I want to learn or understand better?

A: I have some knowledge about conducting software projects and the methodology linked to this. I also have some technical skills required in this context

B: I would like to learn more about the concepts Agile/Scrum and obtain deeper knowledge about the technical skills associated with software engineering (i.e. coding) and linking together these in the tech stack.

A->B: I will bridge these gaps through attending classes and exercises but mostly through working together with my project team, as it is diversified in its knowledge.

- How can I help someone else, or the entire team, to learn something new?

A: The team currently consists of three students from the Business Management program and four students from the Software Engineering program. This amongst other factors makes the groups knowledge based diversified and also divided.

B: The ambition is that the team has shared knowledge based on their incumbent competence. This means as Business Management student to be able to help the team learn concepts such as Business Model Canvas, Value Proposition, Customer Segmenting.

A->B: To bridge the current knowledge gap it is important to be present and open minded during the projects work.

- What is my contribution towards the team's use of Scrum?

A: Since we are at the beginning of the course we are at the start of learning the usage of Scrum.

B: Our goal in this project is to learn Scrum Methodology and also implement this in our processes.

A->B: To bridge these gaps I have attended group exercises and lectures that included the topic of Scrum. I have also tried to include this in working with the social contract and setting up the structure for the project.

- What is my contribution towards the team's deliveries?

A: Our deliveries have been a Social Contract and we are also working on an idea for our Business Model Canvas and Mock-up.

B: We have delivered a Social Contract and aim to deliver a Business Model Canvas and Mock-up by the end of next week.

A->B: To bridge this gap I will conduct and attend workshops with the group in order to generate an idea that serves as the basis for our Business Model Canvas and Mock-up.

Furthermore, I will be able to formulate both the Business Model Canvas and the Mock-Up together with the team based on previous experience and knowledge.
