

Individual Reflection 27/5 – 2019

- What do I want to learn or understand better?

During the last sprint. During the coming sprint we focused on refining our application which mostly meant bug fixing. We also presented our idea. This meant that I learnt how to properly present a software application. The work that remains is finish the final report. This exercise will help me further my ability to reflect on our work and also internalize what we have done, both in terms of project scope, coding, project management and scrum methodology.

Learnings so far are the effective use of pair programming and measuring relevant KPIs. Our effort, velocity and KPIs all improved during the entire project, I think this is contributed towards us working to continuously improve ourselves and focusing on improving the process.

- How can I help someone else or the entire team to learn something new?

Through the final report reflection I will actively share my insights and take aways from the project. In this way the entire team will be able to take part of what I have learned and include this in their own understanding of conducting and managing software projects.

- What is my contribution towards the team's use of Scrum?

During the last sprint I participated in (semi-daily) scrum-meetings. I took part in pair programming. It is my ambition that this will continue to contribute in the team's use of Scrum as well as enable us to share knowledge and distribute the workload more even.

I also attended Reviews and Reflection.

This last sprint will consist of completing the final reflection report. During this I will conclude our learnings of scrum and also relate our experience to relevant literature and sources on the topic.

- What is my contribution towards the team's deliveries?

During the last sprint we have focused on fixing major bugs that we have identified; amongst them that a user should be able to give reviews to all they travelled with, not only those within the group. We also made sure that when users get put into the same group that they just left, in order for users to be able to curate the content of the application. This delivery was achieved within my programming pair. I also took part in the presentation of our project.

The next weeks delivery will consist of the final reflection report which I will take a major part in producing.
