

Individual Reflection 13/5 – 2019

- What do I want to learn or understand better?

During the last sprint I learnt more about back end development. During the next sprint I want to learn more about REST-APIs and https endpoints specifically. I will also be the scrum master, thus I want to better learn how to manage a project using scrum methodology.

My ambition is to bridge this gap through working with my Scrum Team and pair program as well as read up on my own. And use the handouts given in the course about scrum methodology and take help from my team members who have previously been scrum masters.

- How can I help someone else, or the entire team, to learn something new?

During the coming sprint, I will learn through pair programming and reading up on my own on new concepts. It is my ambition to spread this knowledge to the rest of the group, perhaps with a focus on those who doesn't have deep technical knowledge on beforehand.

Since we have divided our group in to back-end and front-end teams this creates a good foundation of sharing knowledge between these parties.

- What is my contribution towards the team's use of Scrum?

During the last sprint I participated in (semi-daily) scrum-meetings. I took part in pair programming. It is my ambition that this will continue to contribute in the team's use of Scrum as well as enable us to share knowledge and distribute the workload more even.

I also attended Reviews and Reflection. For the next sprint I will be the Scrum Master, thus my contribution for towards the team's use of Scrum is quite significant since it's dependent on that I follow the methodology.

- What is my contribution towards the team's deliveries?

My main delivery was that of my programming pair. We worked on the back end so that when users would be able to leave a group within our application. We also made sure that when users sends a message, their name will display.

During our next sprint, the entire team will work on implementing social profiles and a rating system within the application. My team is devoted towards the back-end part. In order to contribute we will create a review identity in both back-end and frontend, create end points to give reviews and store reviews in the user.
