

What do I want to learn or understand better?

At the moment I want to learn more about Business model canvas as well as get back to full understanding of GIT and version handling. It has been a while since we used a repository so I feel it's important to refresh my skill set so that I can be useful for the team. Business model canvas is something that I know absolutely nothing about and would enjoy the process of learning and understanding it.

In order to become fully comfortable with Git repository again, I would primarily just have to use it a couple times in order to regain the muscle memory. If I want to accelerate the process of re-learning Git I could always research about the process and do some exercises so that git commands become instinctive. My plan for acquiring and understanding of Business model canvas will primarily be dependant on online research. I will however take into consideration that our group consists of 3 Economics students who have a very good understanding of the model and they could thereby be a very useful source of information.

How can I help someone else, or the entire team, to learn something new?

I believe I can be fairly useful for the team when it comes to the entire scrum process. Due to the fact that I have worked in a scrum team for a short period of time I have been introduced to the whole process and feel as if I can use my experiences as a contribution to other people. That being said, it has been a while since I worked in a scrum team so I would still have to refresh my memory on the exact proceedings so that I can be a valuable asset to the team where they can use me as a source of information.

My initial thoughts on how I can achieve my goal of helping others in the team will be to improve on my own knowledge of scrum. I will do so by going back and looking at my backlog as well as our task breakdowns to get a better understanding of the scrum layout. Secondly, I will probably research parts of the scrum content and process to complement my understanding.

What is my contribution towards the team's use of Scrum?

As I mentioned in the previous question I could be a relatively valuable asset to the team's use of scrum. I will thereby reference the answers to this questions from the

previous question as I feel that I have thoroughly explained my current knowledge on scrum, the level I wish to be at, and how I will achieve my goal.

What is my contribution towards the team's deliveries?

Based on the current situation I have only been able to contribute to the social contract as it is the only product we have produced. Within that scope I feel I can contribute with ideas about a product that we could produce at the end of this course. I would like to contribute to the team by always completing my tasks on time and contributing with positive and well thought project ideas that we can use within our scope. Given that the next proceeding will be to determine a product, the aforementioned will be very useful to the teams deliveries.

I will achieve this by considering past projects that other people have done, as well as trying to think of new ideas which are sustainable, mobile, and most importantly realistic within the timeframe.
