

App Description:

An android application where users who wish to travel with other people in a taxi can find one other and travel together, splitting the cost.

A user can open the application and enter the destination they wish to go to and then the app will match them with other people going in a similar direction from a similar position.

After the matching process is complete they will contact a taxi service (Taxi, Uber, Lyft, etc) and commute together.

App flow:

Open App

- First session
 - Login/signup with facebook account
 - Accept Terms and Conditions
 - GDPR allow access to profile
 - Shows a logo, preferably transparent
- Next session
 - Automatically logged in to account
