Individual Reflection 29/4 – 2019

- What do I want to learn or understand better?

I have this week learnt some about Java Spring Boot Application and how it can give us more focus on implementation of code rather than configuration

I am still not quite content with my knowledge of the integration between webserver and client and also how to integrate back-end with front end.

My ambition is to bridge this gap through working with my Scrum Team and pair program as well as read up on my own.

- How can I help someone else, or the entire team, to learn something new?

During the coming sprint we are now approaching areas of implementation which are new to several of us. It is my ambition to pick out at separate area within the scope of our tasks, which is unknown to all, and teach me that through studying on my own and then teaching my pair-programming team, and eventually teaching the entire team.

- What is my contribution towards the team's use of Scrum?

During the last sprint in (semi-daily) scrum-meetings. I took part in pair programming during which I found effectuful. It is my ambition that this will continue to contribute in the team's use of Scrum as well as enable us to share knowledge and distribute the workload more even.

As I couldn't attend our Review or Reflection I tried to catch up as well as possible through looking through the documentation that the group had submitted towards our repository in this matter.

- What is my contribution towards the team's deliveries?

My main delivery was the logic for a user to find a team. We wrote a method were we implemented an algorithm consisting of two for-loops and some helper-methods.
