Individual Reflection 20/5 – 2019

- What do I want to learn or understand better?

During the last sprint I learnt more about how to apply the scrum methodology from a scrum masters PO. This meant conducting reviews, reflections and daily stand up meetings. We also experienced some bugs and I learnt more about debugging. I also learnt more about back end development, working with a cloud-based database and version handling. During the coming sprint we will focus on refining our application which means some more bug fixing. I want to learn more about how to do this and believe that I will be able to to do so since my programming partner is experienced in this area.

My ambition is to bridge this gap through working with my Scrum Team and pair program as well as read up on my own. And use the handouts given in the course about scrum methodology and take help from my team members who have previously been scrum masters.

- How can I help someone else, or the entire team, to learn something new?

During the coming sprint, I will learn through pair programming and reading up on my own on new concepts. It is my ambition to spread this knowledge to the rest of the group, perhaps with a focus on those who doesn't have deep technical knowledge on beforehand.

Since we have divided our group in to back-end and front-end teams this creates a good foundation of sharing knowledge between these parties.

- What is my contribution towards the team's use of Scrum?

During the last sprint I participated in (semi-daily) scrum-meetings. I took part in pair programming. It is my ambition that this will continue to contribute in the team's use of Scrum as well as enable us to share knowledge and distribute the workload more even.

I also attended Reviews and Reflection. For the last sprint I was also the Scrum Master, thus my contribution towards the team's use of Scrum is quite significant since it was dependent on me following the methodology.

- What is my contribution towards the team's deliveries?

We created entitys for reviews in the back-end as well as the front end part. Enabled storing these in users and integrated them with the other entitys.

During the next sprint we will focus on fixing major bugs that we have identified; amongst them that a user should be able to give reviews to all they travelled with, not only those within the group. I will also make sure that when users get put into the same group that they just left, in order for users to be able to curate the content of the application.

The deliveries will be achieved within the programming pairs.
